Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-17 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 1-8 is/are allowed.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 9, 11-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Gaskill et al., US 5,502,502.

Regarding claims 9, 14, Gaskill et al. discloses in figures 1-4 a method for generating drive signals comprising the steps of: examining a sync signal (H SYNC) for the presence of one or more sync pulses (14, Fig. 3); outputting said one or more sync pulses as drive pulses if said sync pulses are present (FIG 4A); and enabling a free-running oscillator (oscillator in PLL 16) to output one or more drive pulses if said sync pulses are not present (FIG 4B)(column 1, lines 45 - column 2, line 8).

Regarding claims 11, 15, the sync signal (H SYNC) is horizontal sync and the drive signal (H DRIVE) is horizontal drive.

Regarding claims 12-13, 16-17 the limitations/features of whether the sync signal and the drive signal are NTSC signals or not are not given any patentable weight because of an intended use of a communication standard.

Allowable Subject Matter

Claims 1-8 are allowed.

Claim 10 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: the best prior art of record, Gaskill et al., taken alone or in combination of other references, does not teach or fairly suggest "the repletion frequency of said free-running oscillator output is lower than that of said sync pulses" as set forth in claim 10 or the pulse duration as set forth in claims 1-8.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bell et al., US 7,307,481 discloses a frequency synchronization discriminator.
